How to read this report

- "Complete" is recomputed from progress records every time the report is generated, never read from a cached percentage — a cached value can drift from what a student has actually done.
- A quiz score shown here is always the student's **latest** completed attempt, not their best or first.
- Only completed attempts count as an attempt; an attempt started and abandoned is not counted or scored.
- The question-level confusion tables further on analyse each student's **first** completed attempt at a quiz only, so a question's difficulty reflects how the cohort met it fresh, not how retries wore it down.
- Multi-select (checkbox) scoring now requires every correct option to be selected and no incorrect one. A stored score for a checkbox question answered before this change can disagree with the wrong-answer detail shown below it; historical attempts are not rescored.
- Activities and free-text questions carry no completion or correctness record in FLS, so they are excluded from both the completion figures and the question-level analysis.
- This report covers only courses registered to the cohort as a whole. A course a student joined individually is not included.

Status legend

-  Quiz passed, or 100% complete.
-  Quiz failed, or not started.
-  At-risk flag raised for this student.
-  In progress.
-  Quiz attempted, but no pass mark is configured so no verdict can be given.
- Not applicable — never attempted, or nothing to show.
