

Cohort progress report

RPC 2026-03 · Johannesburg intake

COURSES COVERED

RPC theory (multirotor) — 24 items, 4 quizzes

Radio licence primer — 10 items, 2 quizzes

GENERATED Friday 14 August 2026 · 09:42 SAST (UTC+02:00)

GENERATED BY Nomsa Dube — Programme coordinator, First Class

COHORT SIZE 9 learners

Figures reflect data as of generation time. Activity recorded after 09:42 SAST on 14 August 2026 does not appear in this report.

COHORT OVERVIEW

Cohort at a glance

Headline numbers for RPC 2026-03 · Johannesburg intake, followed by the learners the at-risk rules flagged at generation time. Median completion is measured across all enrolled course items.

COMPLETED EVERYTHING

Learners needing attention

4 of 9 flagged

Khumalo, Naledi	p. 13
NO ACTIVITY No recorded activity in any enrolled course since enrolment on 18 May 2026.	
Mokoena, Thandi	p. 14
FAILED LATEST QUIZ ATTEMPT Failed the latest attempt at Air law (AL) — 58% against a 75% pass mark.	
INACTIVE 14+ DAYS No activity for 17 days (last seen 28 Jul 2026).	
Sithole, Lerato	p. 19
FAILED LATEST QUIZ ATTEMPT Failed the latest attempt at Meteorology (MET) — 60% against a 75% pass mark.	
van der Merwe, Pieter	p. 20
INACTIVE 14+ DAYS No activity for 25 days (last seen 20 Jul 2026).	

All flagged learners fit on this page. When more qualify than fit, the count above stays complete and the remainder carry their flags in section 2. The active rules and their thresholds are listed under Contents and definitions; rule sets are configured per deployment.

Radio procedures (PROC)	22

Definitions and method

Complete. A course counts as complete when every course item is marked complete. “Completed everything” on the at-a-glance page means every enrolled course is complete.

Quiz score. The score shown against a learner is always their latest submitted attempt, not their best.

Attempt. A submitted quiz sitting. Sittings opened but not submitted are not counted.

Cohort analysis. Section 3 counts first attempts only, so retakes do not double-count a question's difficulty. Personal rollups in section 2 cover all of a learner's attempts.

Activity. Completing a course item or submitting a quiz attempt.

At-risk rules active in this report.

- **No activity** [no-activity] — 0% complete with no quiz attempts recorded.
- **Failed latest quiz attempt** [failed-latest-quiz] — latest submitted attempt at any quiz scored below the 75% pass mark.
- **Inactive 14+ days** [inactive] — no item completion or quiz submission in the last 14 days (N = 14 is a working value pending spec sign-off, and is set per deployment).

Small cohorts. Where a group is smaller than 30, this report shows plain counts rather than percentages — a cohort of nine cannot support the precision a percentage implies.

Colour and print. Status is always shown as colour, a glyph, and a number together, so the report stays readable in greyscale print.

RAG LEGEND — the same tints and glyphs used in every status cell:

✓ success — complete, or a score at or above the pass mark

→ info — in progress (50%+ of items)

▲ warning — behind (20–49%), or a marginal fail (60–74%)

✗ error — significantly behind (1–19%), or a clear fail (below 60%)

○ muted — not started, or no attempt

SECTION 1

Summary of learner progress

One table per course. Column headers repeat on every page a table spans; where a course carries more quizzes than fit, the table splits rather than shrinking the type.

RPC theory (multirotor)

AL = Air law · MET = Meteorology · POF = Principles of flight · NAV = Airspace and navigation. Score = latest attempt · ×n = attempts · quiz columns follow course order · all dates 2026.

INCORRECT ANSWERS — AIR LAW (AL), ALL ATTEMPTS

Q	QUESTION	WRONG	INCORRECT OPTIONS PICKED
Q2	Maximum height above the surface for a standard RPAS operation	×1	D — 1 000 ft
Q7	Distance from an aerodrome within which RPAS operations require approval	×1	B — 8 km
Q9	Final responsibility for the safe outcome of an RPAS flight rests with	×1	C — The ATO

INCORRECT ANSWERS — METEOROLOGY (MET), ALL ATTEMPTS

Q	QUESTION	WRONG	INCORRECT OPTIONS PICKED
Q1	Conditions that most favour the formation of radiation fog	×2	B — Overcast skies and strong wind · C — Warm, gusty afternoons
Q3	Density altitude increases when	×2	B — Air temperature falls · C — Surface pressure rises
Q6	Wind direction in a METAR is given relative to	×2	B — Magnetic north ×2
Q8	Cloud base heights in a METAR are reported	×1	B — Above mean sea level

SECTION 3

Quiz confusions across the cohort

Read these tables as prompts, not verdicts. A high error rate can mean a hard but fair question as easily as a broken one — and with nine learners, one or two answers move a row up or down the ranking. Cross-check a flagged question against the course material before changing it.

Air law (AL)

Showing the worst 4 of 5 questions with at least one incorrect first attempt. Attempted by 8 of 9 learners · first attempts only · counts, not percentages, at this cohort size.

Q	QUESTION AND CORRECT ANSWER	INCORRECT OPTIONS CHOSEN	GOT IT WRONG
Q2	Maximum height above the surface for a standard RPAS operation ✓ B — 400 ft	✗ D — 1 000 ft ×4 ✗ A — 200 ft ×2	6 of 8
Q7	Distance from an aerodrome within which RPAS operations require approval ✓ C — 10 km	✗ B — 8 km ×4 ✗ A — 5 km ×1 ✗ D — 15 km ×1	6 of 8
Q5	Minimum lateral distance from a person or structure not under the pilot's control ✓ B — 50 m	✗ A — 30 m ×1 ✗ C — 100 m ×1	2 of 8
Q9	Final responsibility for the safe outcome of an RPAS flight rests with ✓ B — The pilot in command	✗ A — The observer ×1 ✗ C — The ATO ×1	2 of 8

Meteorology (MET)

All 4 questions with at least one incorrect first attempt are shown. Attempted by 6 of 9 learners · first attempts only · counts, not percentages, at this cohort size.

Q	QUESTION AND CORRECT ANSWER	INCORRECT OPTIONS CHOSEN	GOT IT WRONG
Q6	Wind direction in a METAR is given relative to ✓ A — True north	✗ B — Magnetic north ×3	3 of 6
Q8	Cloud base heights in a METAR are reported ✓ A — Above ground level	✗ B — Above mean sea level ×2 ✗ C — As flight levels ×1	3 of 6
Q1	Conditions that most favour the formation of radiation fog ✓ A — Clear skies and light wind	✗ B — Overcast skies and strong wind ×2	2 of 6
Q3	Density altitude increases when ✓ A — Air temperature rises	✗ C — Surface pressure rises ×1	1 of 6

Principles of flight (POF)

All 3 questions with at least one incorrect first attempt are shown. Attempted by 5 of 9 learners · first attempts only · counts, not percentages, at this cohort size.

Q	QUESTION AND CORRECT ANSWER	INCORRECT OPTIONS CHOSEN	GOT IT WRONG
Q2	Increasing the angle of attack beyond the critical angle causes ✓ B — Airflow to separate and the surface to stall	✗ C — Drag to fall sharply ×2	2 of 5
Q4	In a steady hover, total rotor thrust is ✓ B — Equal to the aircraft's weight	✗ B — Equal to the aircraft's weight ×2	2 of 5
Q7	Adding payload to a multirotor in the hover ✓ C — Increases the power required	✗ A — Reduces the power required ×2	2 of 5

Airspace and navigation (NAV)

All 3 questions with at least one incorrect first attempt are shown. Attempted by 3 of 9 learners · first attempts only · counts, not percentages, at this cohort size.

Q	QUESTION AND CORRECT ANSWER	INCORRECT OPTIONS CHOSEN	GOT IT WRONG
Q6	On a South African chart, an area prefixed FAR is ✓ C — A restricted area	✗ A — A danger area ×1 ✗ B — A prohibited area ×1	2 of 3
Q3	With QNH set, the altimeter indicates ✓ A — Altitude above mean sea level	✗ B — Height above the aerodrome ×1	1 of 3
Q7	A CTR is best described as ✓ B — Controlled airspace around an aerodrome, from the surface up	✗ A — Uncontrolled airspace around any airfield ×1	1 of 3

Radio phraseology (PHR)

All 2 questions with at least one incorrect first attempt are shown. Attempted by 5 of 9 learners · first attempts only · counts, not percentages, at this cohort size.

Q	QUESTION AND CORRECT ANSWER	INCORRECT OPTIONS CHOSEN	GOT IT WRONG
Q4	The word WILCO means ✓ B — I understand and will comply	✗ A — Message received ×1	1 of 5
Q5	Readability is reported on a scale of ✓ B — 1 to 5	✗ C — 1 to 9 ×1	1 of 5

Radio procedures (PROC)

All 2 questions with at least one incorrect first attempt are shown. Attempted by 3 of 9 learners · first attempts only · counts, not percentages, at this cohort size.

Q	QUESTION AND CORRECT ANSWER	INCORRECT OPTIONS CHOSEN	GOT IT WRONG
Q1	The VHF emergency frequency is ✓ B — 121.50 MHz	✗ C — 124.80 MHz ×1	1 of 3
Q5	Before transmitting on a frequency, first ✓ C — Listen out to confirm the frequency is clear	✗ B — Transmit a radio check ×1	1 of 3
